

Dredging

Environment protection is an important topic in the world. Some big rivers should be cleared away. The mud and the water's mixture should be transported by our dredging pumps, which would be installed on the ship or on the beach. Near the sea, a lot of dredgers are installed with our gravel pumps for picking up the sands from the seaside. The sand contains the SiO₂, which is good material for glass or other building usage. We offer these for clients in Canada, UAE, Cote d'Ivoire and other areas.
