

### **Sewage water processing**

Sewage water, industrial waste water and life waste water is produced every day everywhere. There are impurities in the water and maybe corrosive. The slurry pumps are good at delivering this kind of liquid. Usually, for this kind of usage, more slurry pumps are run in series in order to reach the goal of long distance. Then, the sewage water would be transported to industrial water treatment plant to keep the environment green.

### **Sewage pump application**
